
Robinson Town Centre Intermodal Facility

The proposed Robinson Town Centre Intermodal Facility could soon be a transportation hub for people who commute to Downtown Pittsburgh and other destinations from the airport corridor and neighboring Beaver and Washington counties each day.

This new parking facility, located near the intersection of US 22/30 and SR 60 in Robinson and North Fayette townships, will have approximately 850 spaces and include landscaping, lighting, a sheltered boarding area, seating and other customer amenities. Patrons would be able to park their vehicles - on either a surface parking lot or in a two-story parking garage - and ride public transit to and from Downtown Pittsburgh, the Pittsburgh International Airport or Oakland. The Robinson Town Centre Intermodal Facility will help increase mobility in the airport corridor and offer additional transit service options, such as providing connecting service with local bus routes as well as with other transit agencies.

Bus rapid transit service from the garage and lot would be available via Port Authority's popular West Busway. The busway, opened in September 2000, allows buses to bypass heavy traffic on the Parkway West through Green Tree and provides congestion-free travel to and from Downtown Pittsburgh.

Final design on the facility is near completion. Preliminary engineering work is underway by North Fayette Township on the reconstruction of Montour Church Road. Once this work concludes, the facility's design can be completed and construction could begin in 2006 on both the roadway and the Robinson Town Centre Intermodal Facility. The facility is scheduled to open in 2007.
